### SUMMARY

Frontend Developer specializing in React and JavaScript with experience building responsive, scalable web applications using React, React Flow, Zustand, Redux Toolkit, Supabase, and REST APIs. Passionate about creating intuitive user interfaces and integrating AI-powered features.

### TECHNICAL SKILLS

#### Languages

JavaScript (ES6+), HTML5, CSS3

#### Frontend

React.js, React Flow, Zustand, Redux Toolkit, React Router, Tailwind CSS, Motion.dev

#### Tools

Git, GitHub, Vite, VS Code, Postman, Vercel, Render

#### Backend, Real-Time & Database

Node.js, Express.js, Socket.IO, Supabase (PostgreSQL, Auth, Storage)

#### APIs & AI

REST APIs, TMDB API, OpenRouter API

### PROJECTS & EXPERIENCE

#### CineAI – AI-Powered Movie Discovery Platform 🔗

React.js • Redux Toolkit • Tailwind CSS • Supabase • TMDB API • OpenRouter API

GitHub 🔗

- Built an AI-powered movie discovery platform integrating the OpenRouter API to convert natural language prompts into personalized movie recommendations.
- Implemented secure authentication with Supabase Auth, including signup, login, session persistence, and protected routes.
- Integrated TMDB REST APIs to display trending, Now Playing, Popular, Top Rated, and Upcoming movies with YouTube trailer playback in the hero section.
- Managed global state with Redux Toolkit and built reusable Netflix-inspired UI components, including hero banners, movie cards, carousels, and loading skeletons.

#### TaskStack – Task Management Application 🔗

React.js • Tailwind CSS • Supabase • React Router

GitHub 🔗

- Built a Kanban-style task management application with Planning, In Progress, and Done workflows for intuitive task organization.
- Implemented secure CRUD operations using Supabase with persistent cloud data storage and user-specific data isolation through Row Level Security (RLS).
- Integrated drag-and-drop task movement across Kanban columns, enabling seamless workflow transitions without page reloads.
- Engineered a dark/light theme system with persistent user preference, alongside responsive layouts and client-side form validation for a polished cross-device experience.
- Structured the application using reusable React components and a modular architecture to improve maintainability and separation of concerns.

#### Pipeline Studio – Visual Workflow Builder 🔗

React.js • React Flow • Zustand • Tailwind CSS • REST API

GitHub 🔗

- Built a visual workflow builder using React Flow, enabling users to create and connect node-based pipelines through an intuitive drag-and-drop interface.
- Developed reusable custom nodes and managed graph state efficiently with Zustand for smooth, immediate interactions.
- Integrated a backend API to validate submitted pipelines, detect Directed Acyclic Graph (DAG) structures, and return workflow metadata.
- Designed a responsive, component-driven interface with Tailwind CSS, emphasizing performance, scalability, and maintainable architecture.

### EDUCATION

#### Bachelor of Science in Information Technology

Anugrah Narayan College

2022 – 2025

Patna, Bihar
