SUMMARY

Frontend Developer specializing in React, JavaScript, and modern web technologies. Experienced in building responsive, full-stack web applications using React, Redux Toolkit, Node.js, Supabase, and REST APIs. Passionate about creating scalable user interfaces, integrating AI-powered features, and delivering performant user experiences.

TECHNICAL SKILLS

Languages

JavaScript (ES6+), HTML5, CSS3

Frontend

React, TypeScript, Redux Toolkit, React Router, Tailwind CSS, Motion.dev

Tools

Git, GitHub, Vite, VS Code, Postman, Vercel, Render

Backend, Real-Time & Database

Node.js, Express.js, Socket.IO, Supabase (PostgreSQL, Auth, Storage)

APIs & AI

REST APIs, TMDB API, OpenRouter API

PROJECTS & EXPERIENCE

CineAI – AI-Powered Movie Discovery Platform 🔗

React.js • Redux Toolkit • Tailwind CSS • Supabase • TMDB API • OpenRouter API

GitHub 🔗

- Architected an AI-powered movie discovery platform integrating the OpenRouter API to translate natural language prompts into personalized movie recommendations.
- Implemented end-to-end authentication flow using Supabase Auth, covering signup, login, session persistence, and route-level access control for a fully protected single-page application.
- Integrated TMDB REST APIs to display a featured trending movie with YouTube trailer playback in the hero section, alongside horizontally scrollable rows for Now Playing, Popular, Top Rated, and Upcoming movies.
- Managed global application state for authentication, movie data, and AI recommendations using Redux Toolkit, eliminating prop drilling across the application.
- Built reusable Netflix-inspired UI components including hero banners, movie cards, carousels, and skeleton loading states to improve consistency and perceived performance.

TaskStack – Task Management Application 🔗

React.js • Tailwind CSS • Supabase • React Router

GitHub 🔗

- Built a Kanban-style task management application with Planning, In Progress, and Done workflows for intuitive task organization.
- Implemented secure CRUD operations using Supabase with persistent cloud data storage and user-specific data isolation through Row Level Security (RLS).
- Integrated drag-and-drop task movement across Kanban columns, enabling seamless workflow transitions without page reloads.
- Engineered a dark/light theme system with persistent user preference, alongside responsive layouts and client-side form validation for a polished cross-device experience.
- Structured the application using reusable React components and a modular architecture to improve maintainability and separation of concerns.

Portfolio Website 🔗

React.js • Tailwind CSS • Motion.dev • Socket.IO • Node.js • Express.js

GitHub 🔗

- Built an interactive portfolio using Motion.dev with smooth page transitions, staggered animations, and scroll-triggered effects to showcase projects and technical skills.
- Integrated real-time mouse pointer sharing with Socket.IO, enabling live cursor synchronization between connected users through a Node.js and Express backend.
- Optimized performance, accessibility, and responsiveness across desktop, tablet, and mobile devices using reusable React components, Tailwind CSS, and Vercel deployment.

EDUCATION

Bachelor of Science in Information Technology

Anugrah Narayan College

2022 – 2025

Patna, Bihar
